Pages: 26 Distribution: F

This instruction implements AFPD 11-2, *Aircraft Rules and Procedures*, and AFI 11-202, Volume 2, *Aircrew Standardization/Evaluation Program*. It establishes procedures and criteria for evaluation of all aircrews performing duties in the TG-3/4/9 aircraft. It does not apply to the Air National Guard or Air Force Reserve Command. File a copy of all approved waivers with this instruction. **Attachment 1** contains a glossary of references, abbreviations and acronyms.

See paragraph 1.2. of this instruction for guidance on submitting comments and suggesting improvements to this publication.

The Privacy Act of 1974 applies to certain information gathered pursuant to this instruction. The Privacy Act System Number F011 AF XO A, Air Force Operations Resource Management Systems (AFORMS) covers required information. The authority for maintenance of AFORMS is Title 37 U.S.C. 301a (Incentive Pay), Public Law 92-204, Section 715 (Appropriations Act for 1973), Public Laws 93-570 (Appropriations Act for 1974), 93-294 (Aviation Career Incentive Act of 1974), DoDD 7730.57 (Aviation Career Incentive Act of 1974 and Required Annual Report, February 5, 1976, with Changes 1 and 2), and Executive Order 9497. This instruction is affected by the Paperwork Reduction Act as amended in 1996.

Chapter 1

GENERAL INFORMATION

- **1.1. Conducting Evaluations.** All evaluations are conducted in accordance with the provisions of AFI 11-202, Volume 2, and this instruction.
- **1.2. Recommended Changes and Waivers.** Submit suggested improvements to this instruction on AF Form 847, **Recommendation for Change of Publication**, through standardization/evaluation (stan/eval) channels. Squadron Stan/Eval will forward approved recommendations to 34 OG/OGV in accordance with AFPD 11-2, paragraph 2.4.1. 34 TRW/CC is approval authority for changes/revisions to this instruction. 34 TRW/CC is waiver authority for this instruction. Submit waiver requests in message or memorandum format to 34 OG/OGV.

1.3. Procedures:

- 1.3.1. Flight examiners (FE) use the evaluation criteria contained in **Chapter 3** for conducting flight and emergency procedures evaluations (EPE). To ensure standard and objective evaluations, FEs must become thoroughly familiar with the prescribed evaluation criteria.
- 1.3.2. Unless specified, the examinee or FE may fly in either seat that best enables the FE to conduct a thorough evaluation. The FE normally occupies the front seat during periodic instructor mission evaluations.
- 1.3.3. Prior to the flight, the FE briefs the examinee on the purpose of the evaluation and how it is conducted. The examinee accomplishes required flight planning during the evaluation and furnishes the FE a copy of necessary mission data and maps if required.
- 1.3.4. The FE thoroughly debriefs all aspects of the flight. Debriefs include the examinee's overall rating, specific deviations, area grades assigned (if other than qualified), and any required additional training. A squadron supervisor must attend the debrief if the overall grade is Q-3.
- 1.3.5. Group OGV FEs (and above) may administer SPOT evaluations (including those outside their aircrew specialty) to any aircrew member assigned to the group. Squadron commanders may task any squadron assigned FE to administer SPOT evaluations to any aircrew member in their squadron.

1.4. Grading Instructions:

- 1.4.1. Tolerances in performance parameters are based on conditions of smooth air and stable aircraft conditions. Momentary deviations from tolerances are not considered in grading, provided the examinee applies prompt corrective action and such deviations do not jeopardize flying safety. Consider cumulative deviations when determining the area grade.
- 1.4.2. Use the Grading Criteria in Table 4.1. and the definitions listed below to determine individual area grades. When individual areas are performed well above the Grading Criteria standards then make an appropriate comment stating performance and/or instruction was commendable in the Examiner's Remarks in the Comments block of the AF Form 8. FE judgement is exercised when the wording of areas is subjective and specific situations are not covered.
 - 1.4.2.1. (Q) Performance meets Grading Criteria. Deviations occur that do not detract from the overall Grading Area, but are recognized and corrected in a timely manner.

- 1.4.2.2. (Q-) Performance does not meet Grading Criteria. Deviations occur that detract from the Grading Area when performed according to the Grading Criteria and/or degrades mission effectiveness. Recognition of deviations is slow or delayed and corrections are imprecise, inefficient, incomplete, or untimely. Maneuvers are performed safely but with limited proficiency. Examination of maneuver and procedural knowledge reveals deficiencies in depth of knowledge and/or comprehension.
- 1.4.2.3. (U) Performance does not meet Grading Criteria. Deviations occur that indicate performance outside allowable standards and/or adversely affects mission effectiveness. Recognition and correction of deviations is excessively slow or nonexistent. Performance is unsafe or indicates lack of knowledge or ability.
- 1.4.3. Derive the overall flight evaluation grade (Q-1, Q-2, or Q-3) from the area grades, based on a composite for the observed events and tasks according to AFI 11-202, Volume 2, this instruction, and FE judgment.
- 1.4.4. The General Evaluation Criteria in **Table 1.1.** apply during all phases of flight (except as noted for specific areas):

Table 1.1. General Evaluation Criteria.

General Area	Q	Q-	U
Altitude	<u>+</u> 100 ft	<u>+</u> 200 ft	Exceeds Q- limits
Airspeed	<u>+</u> 5 mph	<u>+</u> 10 mph	Exceeds Q- limits
Heading		Maintains/rolls out ±20° of desired heading	Exceeds Q- limits

- **1.5.** Emergency Procedures Evaluation (EPE). During the ground evaluation, include a sampling of emergency procedures resolved to a logical conclusion.
- **1.6.** Completion of AF Form 8, Certificate of Aircrew Qualification. Record and certify aircrew member qualification using the AF Form 8 in accordance with Attachment 2 and AFI 11-202, Volume 2.

Chapter 2

EVALUATION REQUIREMENTS

- **2.1. General.** There are three types of evaluation in the TG-3/4/9: Qualification (QUAL), Instructor (INSTR), and SPOT. AFI 11-202V2 does not require an Instrument (INSTM) evaluation for TG-3/4/9 pilots. The requirement for a Mission (MSN) evaluation is waived by this instruction IAW the provisions of AFI 11-202V2, paragraph 4.3.3. All areas for evaluation are shown in **Table 2.1.** of this instruction, "Pilot Evaluations." Required (R) areas are indicated for that type of evaluation. A required area is a specific area that must be sampled to complete the evaluation. Include all required areas in the flight evaluation profile. When it is impossible to evaluate a required area in flight, the FE evaluates it by oral examination to complete the evaluation. Document the oral evaluation in the Examiner's Remarks in the Comments block of the AF Form 8. If the FE determines the required item cannot be adequately evaluated orally, the examinee requires an additional flight to complete the evaluation.
- **2.2. Requisites.** All evaluations include the following requisites:
 - 2.2.1. Closed and open book examinations.
 - 2.2.2. EPE.
 - 2.2.3. Boldface/CAPs examination.
- **2.3. Qualification Pilot Evaluation.** A qualification (QUAL) evaluation is administered to those individuals who will not instruct students. Typical evaluation profiles are:
 - 2.3.1. TG-3. All qualification evaluations include a minimum of two sorties. Fly the first sortie in the TG-9 to evaluate spin recoveries. Monitor the second sortie (flown in the TG-3) from the tower, evaluating spins in both directions and all area/pattern maneuvers.
 - 2.3.2. TG-4. All initial qualification evaluations include a minimum of two sorties. Periodic evaluations include one or two sorties. If only one sortie, plan an area tow with the examinee in the front seat (CG permitting) and include a sampling of area maneuvers. If a second sortie is flown, the examinee occupies the rear seat. The examinee briefs the examiner on the sortie profile and performs at least one takeoff and landing.
 - 2.3.3. TG-9. All initial qualification evaluations include a minimum of two sorties with a takeoff and landing from each seat. Periodic evaluations include one or two sorties. The first sortie is a spin proficiency sortie, with the examinee in the rear seat (CG permitting) and includes a sampling of area maneuvers, pattern, and landing. The second sortie (if required) includes proficiency items requested by the examiner. The ground evaluation should include all basic and advanced qualification topics for which the examinee is qualified (TG-3, TG-4, TG-9, cross-country, aerobatics, competition, wave, and demonstration). The examinee briefs the examiner on the sortie profile(s). A TG-9 QUAL evaluation satisfies the recurring QUAL evaluation requirements in the TG-3 and TG-4 provided all requisites are met for each MDS aircraft (reference AF/XOO Memo [Waiver], 7 Dec 98.)
- **2.4. Instructor Pilot Evaluation.** All instructor pilot (IP) evaluations are combined with aircraft qualification evaluations to evaluate both proficiency and instructor ability. Typical evaluation profiles are:

- 2.4.1. TG-3. Accomplish TG-9 QUAL/INSTR evaluation in accordance with paragraph **2.4.3.** TG-3 instructors are limited to rated staff officers only.
- 2.4.2. TG-4. All initial qualification evaluations include a minimum of two sorties. Training units will select one of the following profiles:
 - 2.4.2.1. Airmanship 251. This profile is for instructors who are not Airmanship 461 (AM-461) qualified. The profile may include one or two sorties. The first sortie simulates a typical Airmanship 251 (AM-251) sortie. The second sortie (if required) includes proficiency and/or instruction items requested by the examiner. The examinee briefs the sortie profile as if the examiner were an AM-251 student. The examinee determines the profile based on an example AM-251 grade card provided by the examiner. The example grade card is filled out to allow a sampling of AM-251 maneuvers as well as guiding the examinee to accomplish all required areas. The examinee debriefs the examiner after the sortie(s). The examinee flies in the rear seat.
 - 2.4.2.2. Airmanship 461. This profile is for instructors who are AM-461 qualified. The profile includes one or two sorties. The first sortie simulates a typical AM-461 sortie from phase I or III, (depending on the level at which examinee is qualified to instruct.) The second sortie (if required) includes proficiency and/or instruction items requested by the examiner. The ground evaluation includes AM-251 and AM-461 topics. The examinee briefs the sortie profile as if the examiner were an AM-461 student. The examinee determines the profile based on an example AM-461 grade card provided by the examiner. The example grade card is filled out to allow a sampling of AM-461 maneuvers as well as guiding the examinee to accomplish all required areas. The examinee debriefs the examiner after the sortie(s). The examinee flies in the rear seat for a Phase I sortie and the front seat for a phase III sortie.
- 2.4.3. TG-9. All initial qualification evaluations include a minimum of two sorties with a takeoff and landing from each seat. Periodic evaluations include one or two sorties. The first sortie is a spin proficiency sortie, with the examinee in the rear seat (CG permitting) and includes a sampling of area maneuvers, pattern, and landing. The second sortie (if required) includes proficiency and/or instruction items requested by the examiner. The ground evaluation should include all basic and advanced qualification topics for which the instructor is qualified (TG-3, TG-4, TG-9, cross-country, aerobatics, competition, wave, and demonstration). The examinee briefs the examiner on the sortie profile(s). A TG-9 QUAL/INSTR evaluation satisfies the recurring QUAL/INSTR evaluation requirements in the TG-3 and TG-4 provided all requisites are met for each MDS aircraft (reference AF/XOO Memo [Waiver], 7 Dec 98.)

NOTES:

- 1. Sample at least one type of pattern and landing.
- 2. Evaluate in flight during all initial qualification evaluations.
- 3. Evaluate in flight.

Chapter 3

EVALUATION CRITERIA

- **3.1. Evaluations.** To ensure standard and objective evaluations, use Grading Criteria in **Table 3.1.** for required proficiency standards. However, when evaluating instructors, use more general criteria to determine if instructor performance meets the desired mission objectives. Apply the following guidelines to assess the quality of instruction:
 - 3.1.1. Accuracy. Base instruction of a particular task on the delivery of accurate information, i.e., any information presented by the instructor should accurately reflect the numbers, procedures and policies contained in the Grading Criteria.
 - 3.1.2. Appropriateness. Tailor instruction to the student and the task being performed. Avoid teaching above or below the probable level of student understanding.
 - 3.1.3. Timeliness. Time inputs to provide the maximum benefit to the student learning a given task. Depending on the particular situation, the instructor gives inputs at prebrief, during an instructor demonstration, after student performance, or during a debrief.
 - 3.1.4. Error Analysis. The instructor notes student errors and delivers feedback to the student in a fashion that focuses on the techniques and/or procedures necessary for student improvement.
 - 3.1.5. Presentation. Instructor manner and presentation of information is always positive and motivational. Negatively oriented and demeaning delivery is never acceptable.
 - 3.1.6. Intervention. The instructor intervenes, either verbally or physically, prior to exceeding appropriate safety limits. Conversely, the instructor does not intervene so early as to reduce the opportunity for student learning.

Table 3.1. Evaluation Criteria.

Grading Area	Grading Criteria
Area 1. General Knowledge: a. Aircraft General:	Demonstrates thorough knowledge of aircraft systems, limitations, and performance characteristics.
b. Flight Rules/ Procedures:	Thorough knowledge of flight rules and procedures.
c. Local Area Procedures:	Thorough knowledge of local procedures.
Area 2. Emergency Procedures:	Uses all available indications to analyze the situation and emergency. Applies correct, immediate response to Boldface/CAPs and non-Boldface emergency situations. Resolves the emergency situation to a logical conclusion. Effectively uses checklist and in-flight guide. If in flight, maintains aircraft control during performance of critical or non-critical action emergency procedures.
Area 3. Crew Resource Management:	Effectively coordinates with other crewmember throughout the mission. Contributes to the smooth and efficient operation of the aircrew.
Area 4. Publications:	All publications required by AFI 11-2TG-3/4/9V3 and local procedures are current, contain all supplements/changes and are properly posted.
Area 5. Ground Operations:	Accurately determines readiness of aircraft for flight. Performs all pre-takeoff and post-landing checks in accordance with the flight manual and applicable directives. Ground handles the aircraft properly.
Area 6. In-Flight Checks:	Correctly performs all required in-flight checks in a timely manner. Refers to appropriate checklists for all normal and simulated emergency procedures if time and conditions permit.
Area 7. Takeoff:	Maintains smooth aircraft control on centerline throughout takeoff. Promptly establishes proper pitch attitude allowing the aircraft to accelerate to liftoff speed (-0, +5 mph). Applies appropriate crab after takeoff to remain directly behind the towplane. Once the towplane is airborne, transitions timely to the high tow position.
Area 8. Aerotow Straight:	Uses appropriate control inputs to remain coordinated in the high tow position directly behind the towplane.
Area 9. Aerotow Turns:	Uses appropriate control inputs to roll in, maintain, and roll out of turns in the high tow position. Flies the same arc as the towplane and remains coordinated throughout the turn.
Area 10. General Aircraft Control:	Demonstrates thorough knowledge of the flight controls and uses them to maneuver the aircraft properly. Maintains appropriate airspeeds for each particular phase of flight. Remains coordinated during all phases of flight (except for intentional slips, spins, and spin prevents). Initiates timely roll out to maintain a desired heading.

Grading Area	Grading Criteria
Area 11. Radio Procedures:	Complete knowledge of and compliance with correct communication procedures. Effectively communicates with concise, accurate, and proper radio terminology. Maintains awareness of other radio calls and times transmissions appropriately.
Area 12. Clearing:	Maintains constant vigilance during all phases of flight using visual and auditory information to recognize and avoid conflicting traffic.
Area 13. Judgment:	Displays the airmanship and ability to make timely decisions and select alternative courses of action essential to mission accomplishment. Recognizes deviations and unsafe situations and takes appropriate action without prompting. Recognizes environmental effects on the mission and adjusts accordingly.
Area 14. Box the Wash:	Starting from the high tow position moves laterally, then down, over, and up, to fly a box around the prop wash, stopping momentarily at each corner and finishing in the high tow position. The bottom of the box passes through the low tow position. (Exception: The bottom of the box passes through the bottom of the prop wash when flying the TG-9.)
Area 15. Slack Line:	Recognizes a slack line condition and corrects promptly without entering a secondary slack line. Minimizes deviation below the high tow position. Returns to the high tow position in a timely manner. (AM-461 Phase II students and higher must demonstrate the ability to properly set up a slack line.
Area 16. Release:	Properly clears for both aircraft, releases, and makes a coordinated right-hand turn away from the towplane. Releases in the proper location and position and attains a suitable airspeed for the existing conditions.
Area 17. Slow Flight:	Determines and maintains airspeed 3-5 mph above the first aerodynamic indication of a stall in wings-level flight and shallow turns. Uses sufficient rudder to remain coordinated throughout the maneuver.
Area 18. Steep Turns:	In turns using $45-60^{\circ}$ of bank maintains airspeed (± 10 mph) and rolls out on desired point ($\pm 20^{\circ}$). Uses sufficient rudder to remain coordinated throughout the maneuver.
	Raises the nose of the aircraft with sufficient airspeed to reach a wings-level 20–30° nose-high attitude. Continues adding backstick pressure to maintain the nose-high attitude until the aircraft fully stalls. As the nose falls (or wing drops), releases backstick pressure and recovers to a safe flying airspeed without a secondary stall.
Area 20. Turning Stall:	Enters a shallow bank turn and holds a constant bank angle with a slightly nose-high attitude. Recovers promptly at the first aerodynamic indication of a stall by relaxing backstick pressure (closing airbrakes if open) and using rudder (primary) and ailerons to roll wings level. Completes the recovery to a safe flying airspeed without entering a secondary stall.
Area 21. Landing Atti- tude Stall:	Enters a normal wings-level landing attitude with at least ½ airbrakes. Recovers promptly at the first aerodynamic indication of a stall by relaxing backstick pressure (primary) and closing airbrakes. Completes the recovery by establishing the landing attitude without entering a secondary stall while maintaining minimum safe flying airspeed.

Grading Area	Grading Criteria
Area 22. Spiral Dive:	Enters a steep bank turn then continues to increase backstick pressure and bank angle to enter a spiral dive. Recovers promptly by relaxing backstick pressure, rolling wings level with coordinated rudder and aileron, and recovering to a normal flying attitude and airspeed.
Area 23. Rope Break:	Performs the Boldface/CAPs and takes the appropriate action to make a safe pattern and landing considering location, altitude, and existing weather conditions.
Area 24. Spin Prevent:	Enters from a shallow nose-high turn (0-15° bank, 0-15° pitch). Just prior to stall, increases backstick pressure to full and applies full pro-spin rudder. At the first indication of a departure from controlled flight (uncontrollable wing drop), immediately recovers using forward stick pressure and opposite rudder as necessary to break the stall. The recovery is made promptly without a secondary stall to a normal flying attitude and airspeed.
Area 25. In-Flight Planning/Area Orientation:	Follows local area procedures regarding area boundaries, required ground tracks, and altitude restrictions for all phases of flight. Efficiently uses available airspace to safely accomplish the mission.
Area 26. Slips:	Applies proper cross-controls for existing winds to increase the descent rate while maintaining a proper ground track and airspeed (-0, +10 mph). Slips no lower than 100 ft AGL on final.
Area 27. Normal Pattern:	Arrives over the entry point at 1000 ft AGL (\pm 200 ft). Flies proper rectangular ground track for existing weather conditions so as to roll out on final no lower than 300 ft AGL. Maintains pattern airspeed (-0, +5 mph) using the pitch of the aircraft. Uses airbrakes/slips to maintain desired glidepath with approximately ½ airbrakes on final. Uses sufficient control inputs to maintain runway centerline on final. Selects appropriate aimpoint to roll up to a predetermined point (\pm 100 ft).
Area 28. Low Pattern:	Arrives over the entry point at 700 ft AGL (± 100 ft). Attempts to fly a normal pattern, modifying downwind displacement, turn to base, and turn to final to effect a safe pattern and landing. Rolls out on final no lower than 200 ft AGL.
Area 29. Extended Base:	Positions the aircraft down wind from the entry point at a safe altitude. Sequences the aircraft on extended base so as not to interfere with other downwind traffic. Flies a normal base and final once established in the pattern.
Area 30. Normal Landing:	While established on final begins a round out and flare 2-5 ft AGL and touches down smoothly on the main wheel near the stall speed. Removes any crab prior to touchdown and uses the wing-low landing method to correct for crosswinds. Maintains runway centerline (straight ground track if in the grass) during rollout. Slowly releases backstick pressure just prior to loss of elevator authority to gently lower the skid/nosewheel to the ground. Smoothly applies wheel brakes to stop the aircraft.
Area 31. No Airbrakes Pattern & Landing:	Attempts to fly a normal pattern and landing (without airbrakes) modifying downwind displacement, turn to base, and turn to final to effect a safe pattern and landing. Rolls out on final no lower than 200 ft AGL.

Grading Area	Grading Criteria
	Selects the correct aimpoint and makes a normal landing in the alternate recovery area, maintaining proper clearances from buildings, taxiways, aircraft and personnel.
	Makes a normal landing on the runway and comes to a stop near mid-field or 200 ft short of any aircraft/obstacle within one wingspan of the runway, whichever occurs first.
Area 34. No Altimeter Pat- tern & Landing:	Attempts to fly a normal pattern and landing using outside references to judge height above the ground. Rolls out on final no lower than 200 ft AGL.
Area 35. Downwind Pattern & Landing:	Adjusts the traffic pattern as necessary to safely arrive on final, opposite direction at a minimum of 200 ft AGL. Selects an appropriate aimpoint for the wind conditions and makes a normal landing west of sailplane operations but east of the jump pit.
Area 36. Spins: (TG-3/9 only)	Enters and recognizes a developed spin. Properly executes the Boldface/CAPs and recovers with minimum altitude loss. Does not exceed operating limits during entry or recovery.
Area 37. Transfer of Aircraft Control:	Transfers aircraft control using the appropriate physical and verbal procedures of transfer. Does not ride or bump the controls when not flying.
Area 38. Grading Practices:	Accurately assesses student's ability and documents grades in accordance with the training syllabus.

MARVIN R. ESMOND, Lt General, USAF DCS/Air and Space Operations

Figure A2.2.Continued.

AF FORM 8, MAY 85 CONTINUATION SHEET

[Fig. A2.2. Continued]

2. Flight.

Area 6. In-Flight Checks (QUAL) -- Q-. Preoccupation with instruction resulted in late completion of the Before Landing Check.

Area 7. Takeoff (QUAL) -- Q-. Preoccupation with instruction resulted in pilot induced oscillations after liftoff and subsequent touchdown.

Area 27. Normal Pattern (QUAL) -- Q-. Rushed pattern and a long aimpoint resulted in landing long.

- C. Recommended Additional Training:
 - 1. Ground. Accomplish two hours of supervised review, followed by a ground evaluation with a squadron supervisor.
 - Flight. Accomplish one training sortic with a squadron supervisor, emphasizing normal patterns and the importance of flying the aircraft over instructing the student when an abnormal situation develops.

REVIEWING OFFICER'S REMARKS: Cadet Boeing completed additional training with Capt Jones on 30 Nov 98. The ground evaluation and sortic covered all required areas to a satisfactorily level. No further action required.

signed/dated CLARENCE K. JOHNSON, Maj, USAF Operations Officer

Figure 2.3. Continued.

AF FORM 8, MAY 85 CONTINUATION SHEET

[Fig. A2.3. Continued]

C. Recommended Additional Training;

1. Ground (EPE).

Examinee must accomplish two hours of review of local area procedures and the flight manual under the supervision of an IP.

REVIEWING OFFICERS REMARKS:

C2C Cessna completed all additional ground training with Capt Stick on 24 Oct 98. Flight evaluation required,

signed/dated CLARENCE K. JOHNSON, Maj, USAF Operations Officer

RESTRICTIONS:

A. The examinee is placed in a SUPERVISED STATUS and will not perform aircrew duties until a successful QUAL recheck has been accomplished.

EXAMINERS REMARKS:

- A. Mission Description: The examinee completed an unsatisfactory evaluation consisting of one sortie. A front seat spin sortic to 12,500 ft in the Western Aerobatic Area was flown. The planned rear seat pattern tow was not flown.
- B. Discrepancies:
 - Flight.
 - Area 7. Takeoff (QUAL) -- Q-. Over sotation resulted in pilot induced oscillations and aircraft touching down after liftoff.
 - Area 36. Spins (QUAL) -- U. Examinee improperly applied boldface procedures resulting in IP intervention.
- C. Recommended Additional Training:
 - 1. Flight.

Examinee must fly a minimum of two review sorties emphasizing proper spin recovery procedures. Flight recheck must be accomplished for Spins (QUAL) to an acceptable level.

REVIEWING OFFICERS REMARKS:

Two sorties emphasizing correct departure recovery procedures were flown with Capt Jones on 6 and 7 Nov 98. RQ QUAL evaluation required.

signed/dated CLARENCE K. JOHNSON, Maj, USAF Operations Officer
